

PLCM07 Secure Cloud Connector

PLCM07 Secure Cloud Connector is a plug-in module that creates a secure VPN router for use with the JMcloud connectivity architecture. The product is compatible with Series 500 and Series 600 HMI products.

- Includes openVPN/SSL software
- Firewall-friendly connections
- Dual Ethernet ports (WAN/LAN)
- Easy module update with USB and SD interfaces

Highlights

The PLCM07 Secure Cloud Connector is low cost solution designed for remote assistance and data acquisition for the Series 500 and Series 600 HMI products

- Secure connection for industrial remote connectivity
- Based on JMcloud Switchboard Server using secure connection based on OpenVPN/SSL
- Routing for direct access to remote sub-networks (i.e. PLC communications)
- Remote desktop for diagnostic of HMI applications
- Integration with JMobile Studio for remote update of OS, JM Runtime and applications
- Integration with JM4Web for remote web access
- Support virtual serial communication (pending)
- Communication support for programming remote PLC (Ethernet/serial)
- Compatible with main PLC brands
- Simple management of users/groups and devices/groups with JMcloud Connect software

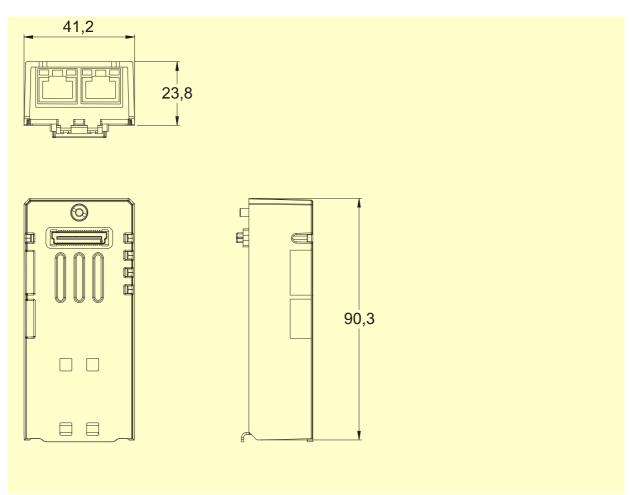

Technical Data

System Resources CPU Operating System RAM	ARM Cortex A8 1 GHz Linux 3.12 512 MB	Protection class Approvals CE	IP20 Emission
Flash Interfaces Ethernet USB	4 GB 2x 10/100 Mbit 1x Host (V2.0, max. 500 mA)		EN 61000-6-4 Immunity EN 61000-6-2 for installation in industrial environments
Memory Card Environmental	microSD card slot		
Conditions Operating temperature Storage temperature Operating and storage humidity	-20° to +60°C -20° to +70°C 5 – 85 % relative humidity, non-condensing
